Save The Ferry

October 23rd, 2023

Last week, I released my four-part docuseries called *Save the Ferry*. The Balboa Ferry is not only a tourist attraction and local favorite, but it protects our environment by saving drivers from a six mile detour across the Balboa Peninsula to the nearest bridge.

The California Air Resource Board (CARB) mandated that all short run ferries become electric by 2025. CARB is an unelected government body that holds disproportionate power in crafting California policy.

Los Angeles Times

“This issue, while important to Newport Beach, also tells the story of what is in my opinion, **California’s anti-business problem.**”

Assemblymember Diane Dixon

The technology to make this transition does not currently exist and is estimated to cost \$5 million to develop.

The current cost to ride the ferry is \$1.50.
